

Reduce the Risk

- ☢ Pilgrim has the same design as the four reactors that melted and exploded in Japan.
- ☢ Tens of thousands of people there will never be able to live in their homes again.
- ☢ An epidemic of thyroid cancer is unfolding among Japanese children.
- ☢ Entergy's nuclear power station is an unnecessary danger to our health and our communities.

Historically, 9% of all GE Mark I reactors built have suffered a meltdown and breach of containment.

Thirty-three of these were built; four now look something this. Three released over 40,000 trillion becquerels of radioactive cesium each. Over 3 years later, 300 tons of radioactive water continued to leak into the environment each day.

↩ Fukushima Unit 3
